

TODD: How to control HUB to force DFU for update?
TODD: Expose UART for chaining devices.
TODD: Add pinouts for "shield" to add wireless capability?
TODD: Allow wireless shield to control multiple chained devices?
TODD: Is chaining even that valuable if you can just plug 'em all into a cheap-ass USB hub?

TODD: Other side of meter should go to GPIO pin to allow for flipping meter wiring.
8MHz crystal allows running over entire voltage range
